Update: Private Well Sampling
May 11, 2007

Completed

- ◆ Final results were received and reviewed for twelve (12) private well water samples that were collected since April 9, 2007.
 - ➔ A trace amount (less than 0.5 micrograms per liter) of 1,2-dichloroethane was detected in one (1) well water sample. The drinking water standard for 1,2-dichloroethane is 5 micrograms per liter.
 - ➔ **No other volatile organic compounds — including those associated with the site (specifically 1,1,1-trichloroethane, 1,1-dichloroethene, and trichloroethene) — were detected in any of the water samples.**
- ◆ The twelve (12) homeowners have been notified of their results through telephone calls and letters containing their results have been put in the mail.
- ◆ Final private well water results for forty (40) properties sampled in 2007 (including those discussed above), have been received, and the homeowners notified.
- ◆ Since 1990, approximately 175 water samples have been collected from approximately 90 private wells in the area.

In Progress

- ◆ Sixteen (16) private wells have been sampled, homeowners will be notified when laboratory test results become available.
- ◆ Private well water sampling continues.
